spacegear

How to use the spacegear logo. Written for anyone who places it: designers, developers, printers. More dos than don'ts; when in doubt, use the files as they are.

1 · The logo

Idea. A planet split along the dash, its two halves sliding apart: the moment a business shifts gear. Space and gear in one shape: the planet from the site's hero, cut and shifted like a gear change. The cut is the old dash, kept as structure. Like an *s*, the symbol reads the same upside down.

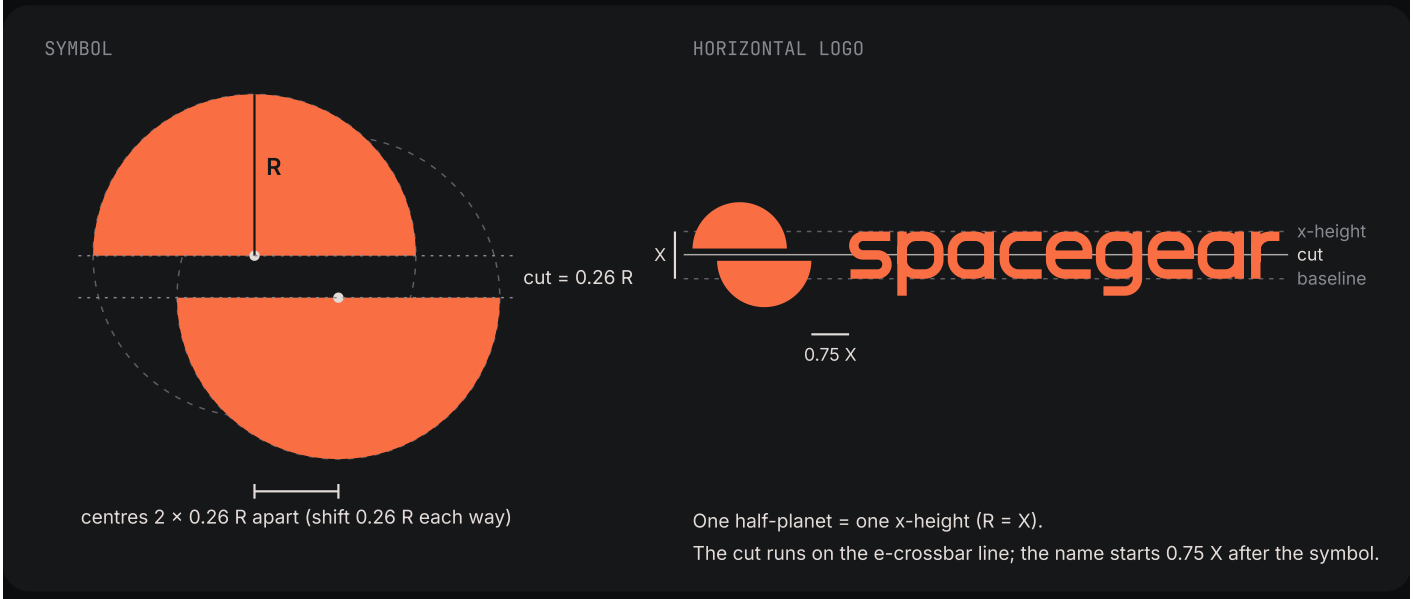

Horizontal (primary) · stacked · symbol · wordmark. Orange on Night is the primary version.

Version	Use it for
Horizontal (primary)	Site header, documents, slides, most uses.
Stacked	Square or tall spaces: social avatars with room, title slides, merchandise.
Symbol	App icons, favicons, avatars, the footer badge core, loaders: once the name is nearby or known.
Wordmark	Where the symbol already appears close by, or space is very wide and short.
Small cut	The symbol at 16–24 px only: a wider cut and shift on whole pixels, so it stays crisp.

2 · Construction

One planet of radius R is cut along its equator. The cut is 0.26 R. The halves then slide 0.26 R each way, in opposite directions, so the symbol is point-symmetric. In the horizontal logo one half-planet is exactly one x-height of the name (R = X), the cut runs on the line of the e's crossbar, and the name starts 0.75 X after the symbol. In the stacked logo R = 1.30 X and the symbol sits 0.90 X above the x-height, centred on the name.

The name is drawn, not typed: lowercase on a rounded-rectangle system (x-height 100, stems 20, corner radius 30 on the centre line, vertical cuts), sharing the symbol's language of straight cuts and round corners. Each letter is its own shape.

Symbol: two half-discs from one planet, cut 0.26 R, shifted 0.26 R each way. Lockup: R = x-height; the cut aligns with the crossbars of the e.

3 · Clear space

Keep a clear zone of **1 X** on every side, where X is the x-height of the name, which is also the height of one half of the planet in the horizontal logo. The zone scales with the logo; never use a fixed distance. In the site's nav pill the pill's own padding is the minimum; nothing else may enter it.

Clear space around the horizontal and the stacked logo.

4 · Minimum sizes

Version	Screen	Print
Horizontal	symbol 20 px tall (logo ≈ 110 px wide)	25 mm wide
Stacked	80 px wide	18 mm wide
Wordmark	80 px wide (x-height ≈ 9 px)	18 mm wide
Symbol	25 px; use the small cut from 24 px down to 16 px	6 mm (small cut down to 4 mm)

16 px · small cut

24 px · small cut

32 px · symbol

horizontal, symbol 20 px

horizontal, symbol 28 px (nav)

stacked, 80 px

Shown at true pixel size on Night.

5 · Colour

One signature colour on dark grounds. Screen values (HEX and RGB) are the masters; CMYK and Pantone are starting points to confirm on a press proof against a physical Pantone guide.

Flame
`#fa6e43`
RGB 250 110 67
CMYK 0 · 68 · 74 · 0
Pantone ≈ 1645 C
The signature: the logo, key accents. ~5–10 % of a layout.

Ash
`#e3dbd8`
RGB 227 219 216
CMYK 0 · 4 · 5 · 11
Pantone ≈ Warm Gray 1 C
Light text and the two-tone half on dark. The site's `ink` token.

Night
`#161719`
RGB 22 23 25
CMYK 72 · 62 · 56 · 82
(rich black)
Pantone ≈ Neutral Black C
The page. Also the Ink for light grounds.

Deep
`#08080b`
RGB 8 8 11
CMYK 75 · 65 · 60 · 90
(rich black)
Pantone ≈ Black 6 C
The scene behind the Earth; the deepest ground.

Ink is Night (`#161719`) used on light grounds: one dark value keeps the palette to four colours.

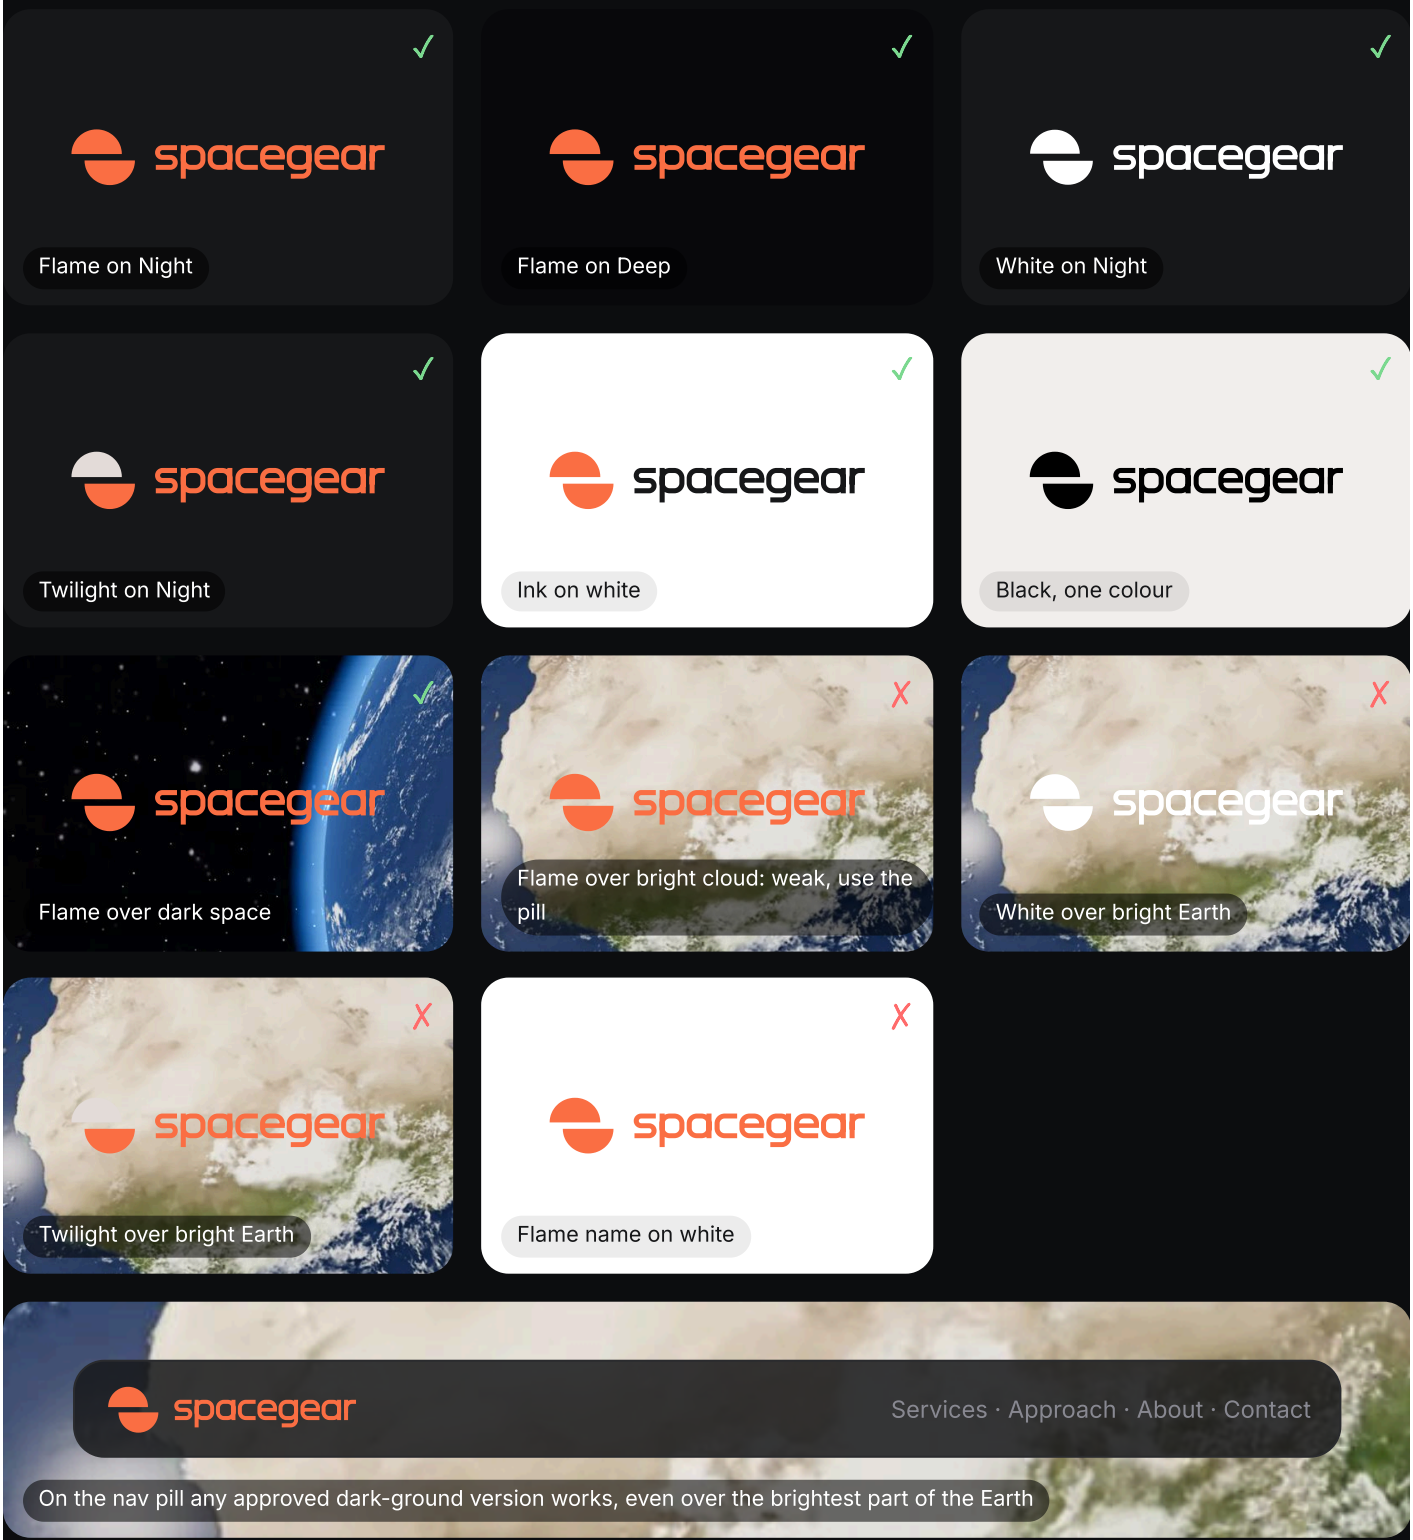

Pair	Contrast	Result
Flame on Night #161719	6.3 : 1	pass
Flame on Deep #08080b	7.0 : 1	pass
Flame on the footer #0c0d0f	6.8 : 1	pass
Ash on Night	13.2 : 1	pass
Ink (Night) on white	17.9 : 1	pass
Flame on white	2.85 : 1	below 3 : 1, so the wordmark goes in Ink

Logo colourways

File suffix	Symbol	Name	Grounds
`-flame` (primary)	Flame	Flame	Night, Deep, the footer, the nav pill, dark space and ocean in photos
`-white`	White	White	Dark grounds and dark photos (geometry thinned 0.6 % against glow)
`-ink`	Flame	Ink	White and light grounds
`-black`	Black	Black	One-colour print, stamps, engraving
`-twilight`	Ash over Flame	Flame	Dark grounds only (Night, Deep, footer): never on light or bright photos, never below 32 px

6 · Approved backgrounds

The hero rule. Over the Earth, keep the logo on the nav pill (or another dark surface). Straight on the image, use only the orange logo, and only over dark space or ocean: over bright land and cloud it weakens, and white and two-tone versions vanish. **The light-ground rule.** On white and light grounds the name goes in Ink (Flame on white is 2.85:1, below the 3:1 floor); the orange symbol may stay as the accent.

Approved (✓) and not approved (✗) grounds.

7 · Typography

The logo is drawn, not typed. Never recreate it by typing "spacegear" in any font, and never bring back the dash (*space—gear*). Use the files or the site components.

Interface type. Inter for headings and text (headings use −0.04 em tracking, as on the site); **`JetBrains Mono`** for labels, eyebrows and small technical captions. Both are under the SIL Open Font License (licences ship in `public/licenses/fonts.txt`). The logo itself needs no font licence.

8 · The ™

Show the ™ **once, on the footer's giant wordmark**, where it is legible, and nowhere else (not in the nav, the favicon or the OG image). It is a claim, not protection: run a professional trademark search on the new mark before relying on it, and switch to ® only after registration (the site's honesty check already rejects ® until then). The ™ is a drawn glyph (`spacegear-tm-*.svg`), sized to the x-height top, never typed.

9 · Motion

- **The halves slide like the site's curtain.** They enter from opposite sides along the cut and lock into the resting logo, in 0.6–0.9 s on the site's ease. On exit they part. The resting frame is always the master.
- **The name rises letter by letter** in the footer as the curtain opens (one glyph per element, ~55 ms stagger), and may lean away from the pointer by a few pixels. Glyph order and spacing never change.
- **Never** spin the symbol, morph the halves into other shapes, animate the colour, or loop it as decoration.
- **Reduced motion:** under `prefers-reduced-motion: reduce`, show the resting logo with no slide and no rise.

Entrance storyboard and the reduced-motion state.

10 · Misuse

Don't stretch or squash it.

Don't rotate or tilt it.

Don't recolour it outside the palette.

Don't add glows, shadows, gradients or bevels.

Don't outline it.

Don't close the cut or undo the shift; the gap and the slide are the idea.

Don't rearrange or resize the parts of a lockup.

Don't type the name in a font or bring back the old dash.

Don't place the logo straight on bright areas of the Earth; use the nav pill.

Don't set the orange wordmark on white (2.85:1); use the ink version.

11 · Files

File	Use
`kit/svg/spacegear-logo-horizontal-{flame,white,twilight}.svg`	Primary logo on dark grounds (white is thinned for reversal; twilight on dark only).
`kit/svg/spacegear-logo-horizontal-{ink,black}.svg`	Light grounds and one-colour print.
`kit/svg/spacegear-logo-stacked-*.svg`	Square and tall formats: avatars, slides, merchandise.
`kit/svg/spacegear-symbol-*.svg`	The symbol alone, 256 canvas (25 px and up).
`kit/svg/spacegear-symbol-small-*.svg`	The 16–24 px cut (favicon, tiny UI).
`kit/svg/spacegear-wordmark-*.svg`	The name alone, where the symbol already appears nearby.
`kit/svg/spacegear-tm-*.svg`	The drawn ™, for the footer wordmark only.
`kit/png/*.png`	Transparent PNGs for office tools (1200 px wide lockups, 1024 px symbol).
`kit/web/*`	favicon.svg / .ico, apple-icon.png, icon-192/512, icon-maskable-512, site.webmanifest, head snippet.
`kit/og/og.png (og.svg)`	1200 × 630 link preview, shapes only.
`site/Brand.tsx, site/Wordmark.tsx`	Drop-in React components (inline SVG, currentColor, per-glyph hooks).

Masters are outlined SVG: no live text, strokes, filters, rasters or transforms. Use the SVGs on screens and the SVG or a printer-made PDF/EPS from them for print; never send a PNG to a printer. Questions about usage: the site owner. Master files: the `brand/kit/` folder.
